

— STABLE MANAGEMENT SOFTWARE

Stable management software designed in a real yard

Rations, care, farriery, staff rota, livery and owners: StallDesk brings together on one screen what used to live in three notebooks, a whiteboard and a dozen messaging threads.

Your yard already runs. StallDesk makes sure nothing slips through.

On most yards, information lives in several places: the care notebook, the turnout whiteboard, each horse's folder, messages from the team and from owners. None of it is done badly. But the information doesn't follow, and it's always the same small leaks:

- ✗ A wormer written down in the wrong place, then forgotten.
- ✗ Overdue shoeing that nobody saw coming.
- ✗ "Who gave the treatment this morning?", called down the aisle.
- ✗ An owner ringing in the middle of feeding to ask whether their horse has been turned out.

Each one costs a little time, money and peace of mind. Added together, they weigh on the whole week.

THE STALLDESK ANSWER

The information follows the horse, not the notebook.

StallDesk brings the whole life of the yard together around a single record for each horse. Information entered once appears everywhere it's needed: in the feed round, on the aisle screen, in the schedule and in the owner's area.

What StallDesk changes day to day

Nothing is forgotten

Vaccinations, worming, trimming, dentist: due dates calculate themselves and come up on the day's screen before they're overdue.

Everything is recorded

Every treatment given and every feed signed off carries the person's name and the time. A log keeps track of who did what.

Everyone knows what to do

Each person sees first what concerns them, and the aisle screen shows the day's duties to the whole team.

Reassured owners

A private area to follow their horse and send their requests in writing. Fewer phone calls while you work.

Less typing

The AI assistant pre-fills records and treatments from a photo; livery statements prepare themselves at the end of the month.

Built for the yard

Big buttons for gloved hands, three languages, works offline: on computer, tablet and phone.

A day on the yard, hour by hour

StallDesk follows your horses' routine, not the other way round. Every moment of the day has its own screen, designed for the person living it, often with gloves on.

05:30

The morning feed, stable by stable

The feed round opens by itself: each horse and its exact ration. One tap ticks a horse off as fed, "Feed all" signs off a whole feed.

07:00

Who goes out, who stays in

On the aisle tablet, the "Pastures & paddocks" screen tells the whole team where each horse is going this morning.

08:30

Treatments, without wondering who gave them

Today's treatments appear with their times. Every dose is signed off, so you know who gave what, and when.

10:00

The horses' work

Each horse's week fits on one grid. After the session, the rider notes how it felt with a few ready-made phrases, or by voice.

14:00

Farrier, vet, dentist

Trimming, worming and vaccination due dates come up by themselves. Appointments are in the schedule, contact details a thumb-tap away.

17:00

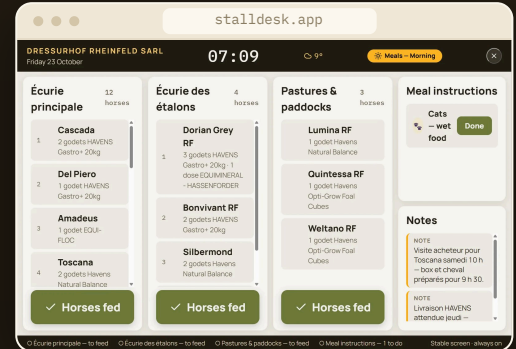

Owners are kept in the loop

Each owner sees their horse and its next vaccinations, sends a turnout or visit request, books the horse walker and finds their livery statements.

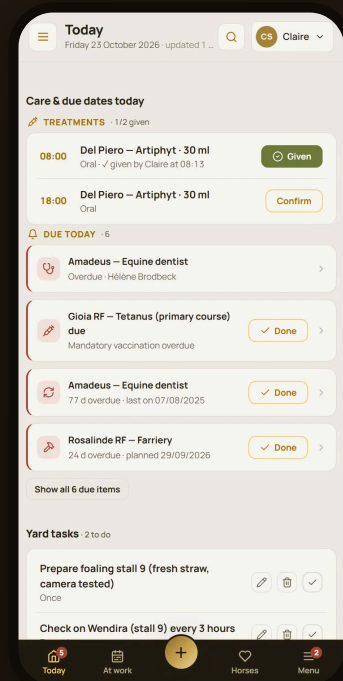

19:00

The day wraps itself up

The daily report goes out by email at the time you choose. Every Sunday, the assistant writes the week's analysis for each horse being tracked.

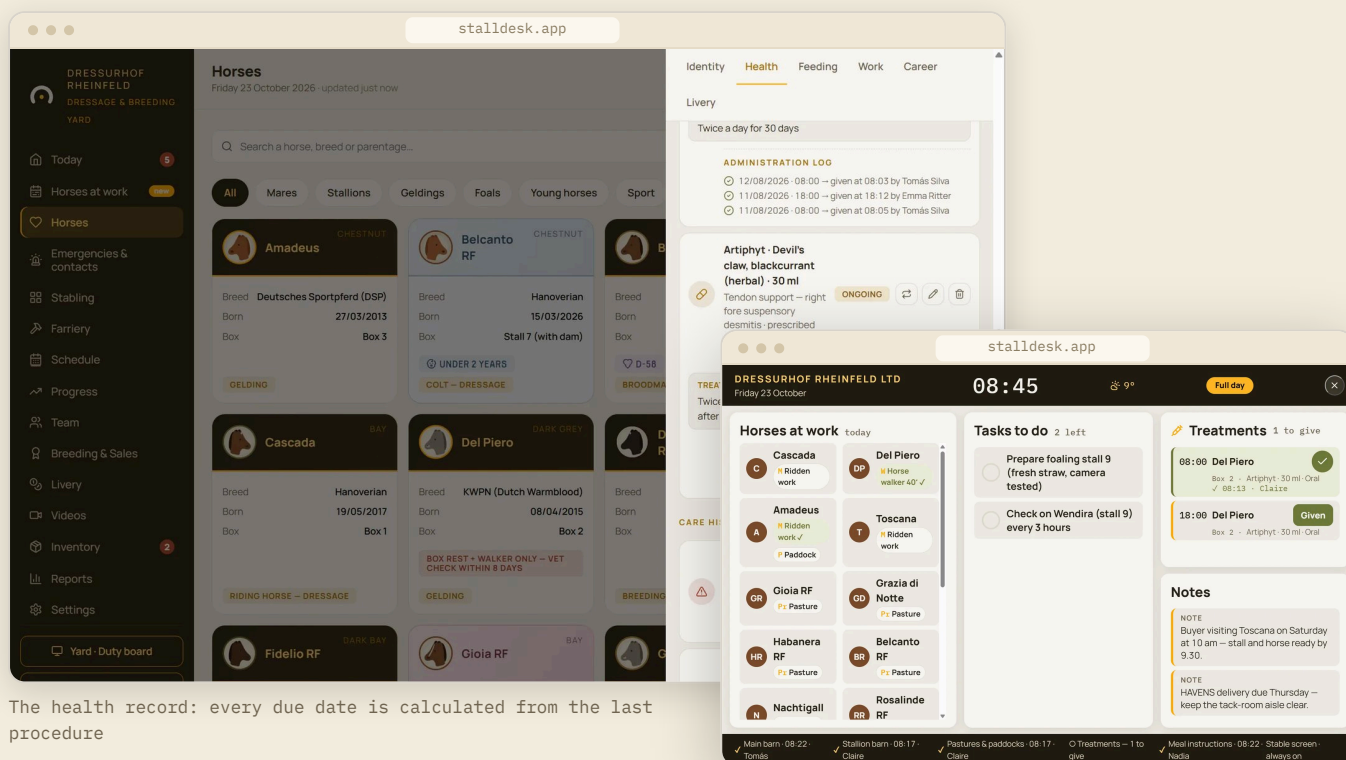

The aisle screen: the day's programme, care, instructions, weather and team

"Today" on a team member's phone

Every horse's health, tracked so nothing slips through the net

Vaccinations, worming, farriery, dentist, current treatments: StallDesk calculates the next due dates, brings them up on the day's screen and keeps a record of every care given, with who gave it and when.

The health record: every due date is calculated from the last procedure

Today's treatments, signed off dose by dose

- ✓ **Calculated due dates**
Intervals set once for the yard (90 days for worming, 42 days for shoeing...), adjustable horse by horse.

- ✓ **Farrier, dentist, osteopath**
Each horse's cycles are tracked and overdue horses stand out at a glance.

- ✓ **PDF health record**
Each horse's record exports as a clear document to hand to the vet or the owner.

- ✓ **Signed-off treatments**
Dose, route, times, reason and vet. Every administration is time-stamped with the name of the person who gave it.

- ✓ **Emergencies and contacts**
Vets, farriers, emergency services: the right number in two taps, even at 3am.

- ✓ **Prescription reading** OPTION
A photo of the prescription pre-fills the medicine, dose and duration.

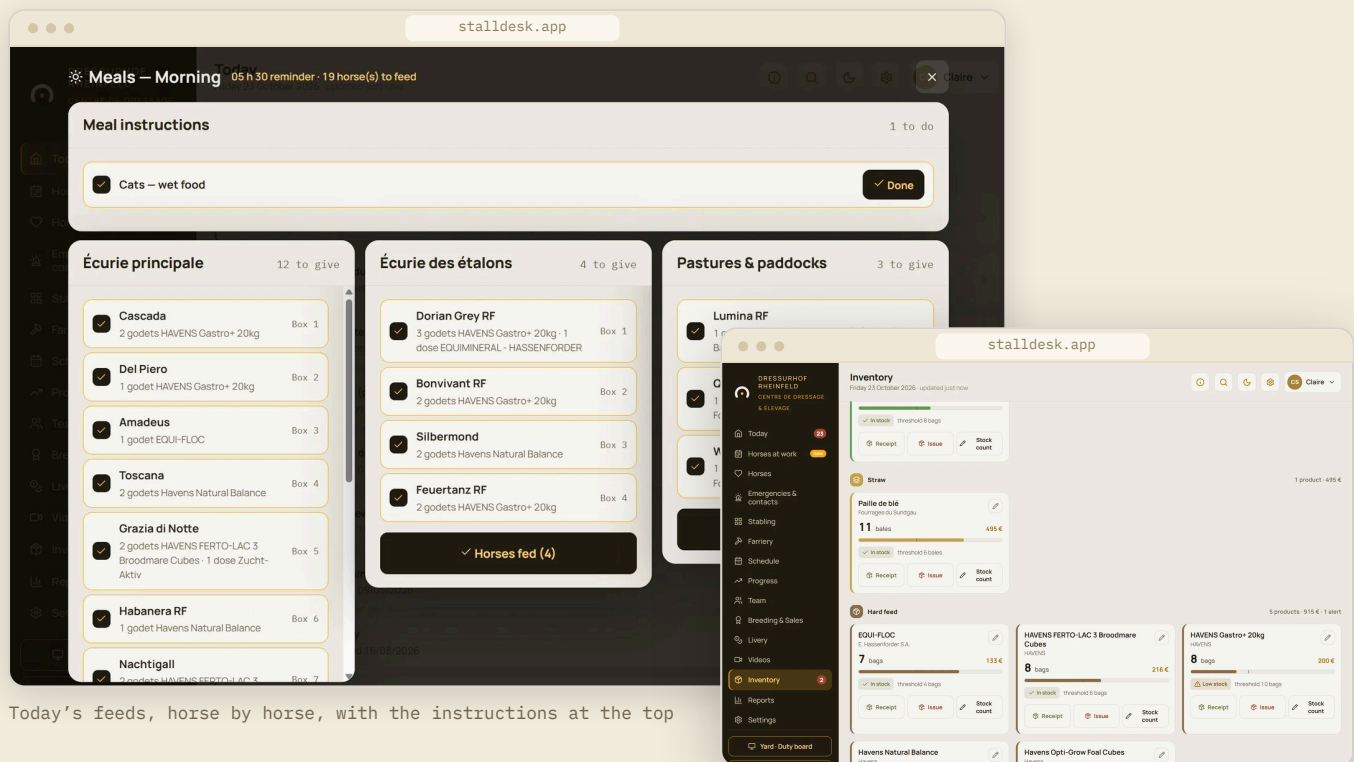

WHAT YOU GAIN

No more "Who gave it this morning?" down the aisle, and no more due dates discovered once they're overdue. When an owner or a vet asks a question, the full history is already there.

Every horse gets its ration, at every feed, without a whiteboard

Morning, midday, back from pasture, evening: StallDesk knows what each horse eats and shows it to whoever is feeding, stable block by stable block, in stable order. Stock keeps up, and warns you before you run out of hay.

Today's feeds, horse by horse, with the instructions at the top

Feed stock and its alert thresholds

- ✓ **Feeding plan**
Each horse's ration, feed by feed. Any change is visible to the whole team straight away.
- ✓ **Instructions at the right time**
Instructions and treatments to give with the ration appear at the top of the list.
- ✓ **Purchase order**
Prepared in StallDesk, emailed to the supplier, exportable as PDF.

- ✓ **Feed round**
It opens at feed time. One tap per horse, or "Feed all" for a whole feed.
- ✓ **Alert thresholds**
A red badge lights up as soon as a product falls below its threshold.
- ✓ **Costs and days of stock**
Stock value, spending over the last six months and how long each product is expected to last.

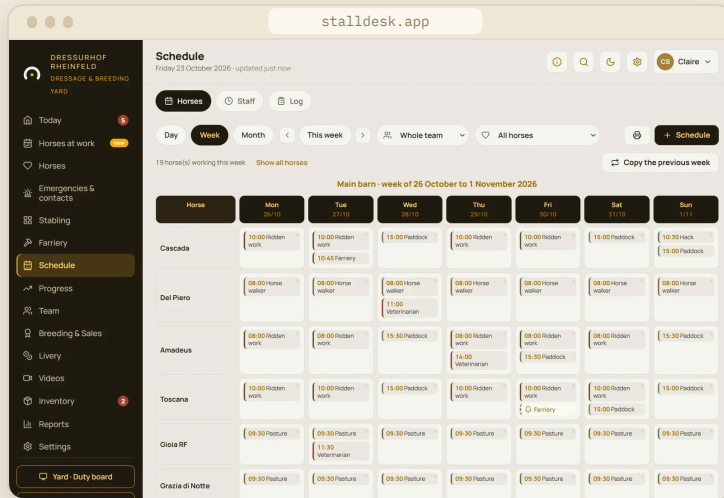

WHAT YOU GAIN

A stand-in feeds just like the regular groom, with no whiteboard to decipher, and you know who fed and when. The hay order goes out before you run short, not after.

The horses' schedule and the staff rota, in one place

Who rides which horse, who goes out to the paddock, when the farrier is coming, who works this weekend: everyone starts their day with what concerns them.

The horses' schedule, week view

WHAT YOU GAIN A session with nobody assigned stays visible under "Unassigned": nothing falls through the cracks.

✓ **Sessions, turnout, appointments**
Day, week and month views, repeating sessions. Turnout is shared between the people on duty.

✓ **Staff shifts**
Work, rest, leave, training, with PDF export and calendar sync.

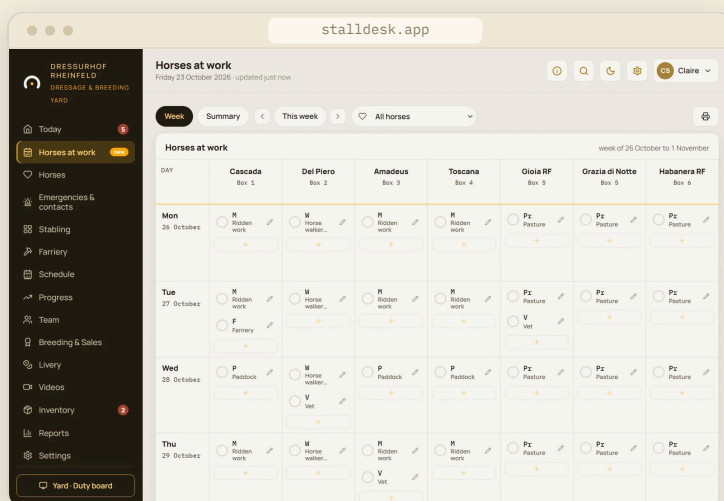

✓ **Hours and clock-in**
Clock in on the aisle screen; scheduled and clocked hours compared, PDF export for payroll.

✓ **Daily report**
An email every day, at the time you choose, for anyone who wasn't there.

Each horse's week, and what the rider says about it

Ridden work, lungeing, horse walker, paddock, rest: the "Horses at work" grid shows at a glance how each horse is working.

"Horses at work": one column per horse, one row per day

WHAT YOU GAIN Work is planned on facts, week after week, and the summary can be printed for the owner.

✓ **Horses at work**
A horse that hasn't worked for three days, or one doing intense session after intense session, stands out straight away.

✓ **Rider feedback**
Ready-made phrases, free text or dictation, as you get off.

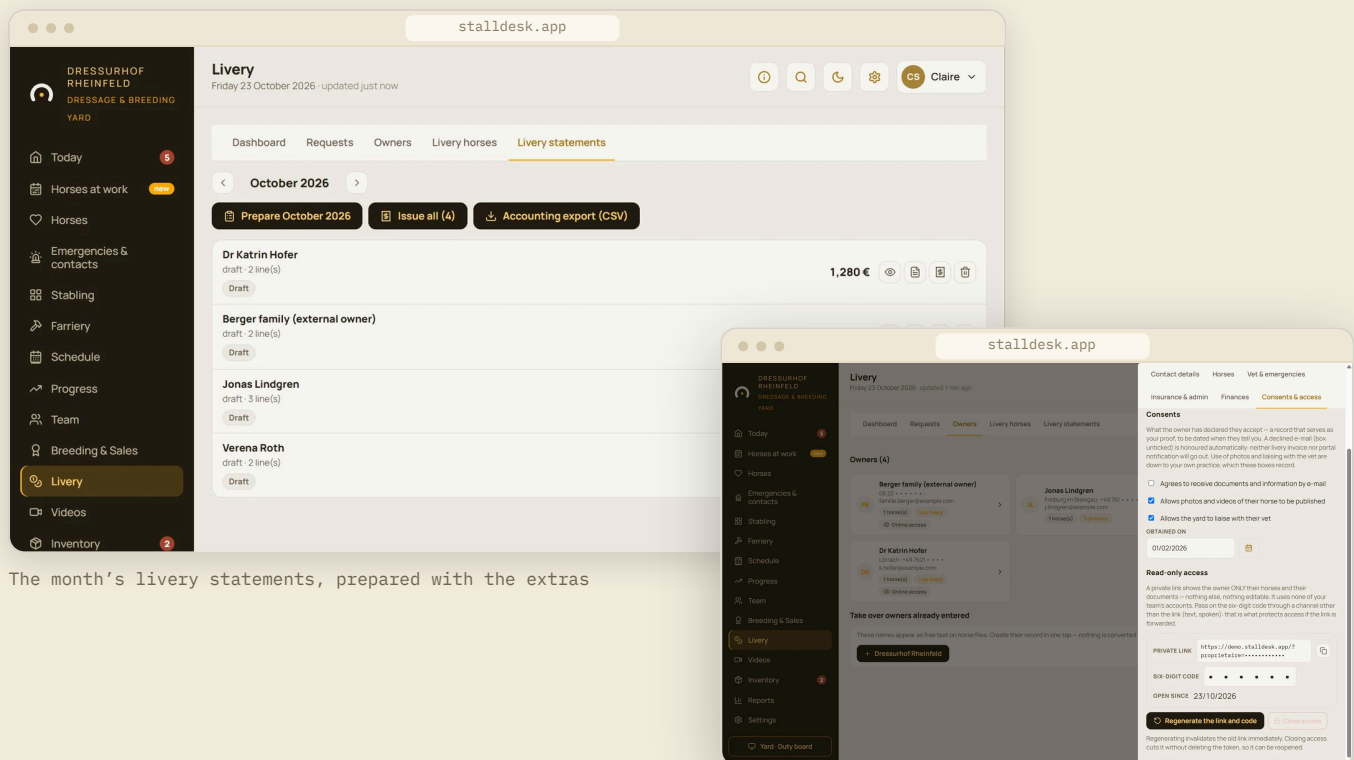

✓ **Workload indicators** **OPTION**
Workload, fitness, monotony and adjustable observations, horse by horse.

✓ **Sunday analysis** **OPTION**
The assistant writes up its observations and advice. Nothing is applied without your approval.

Livery from contract to monthly statement, with better-informed owners

Packages, extras, livery statements, payments, check-in records, health compliance: the Livery module handles the admin side of your livery yard. And every owner has a private area to follow their horse.

The month's livery statements, prepared with the extras

Owner access: a private link and a code, revocable at any time

- ✓ **Contracts and packages**
Stabled livery, grass livery and your own packages. Automatic pro rata, discount, deposit, notice period.
- ✓ **Livery statements**
Monthly drafts, issued in one batch, PDF in the owner's language, payments recorded even when partial.
- ✓ **Owner's file**
What to do in an emergency, insurance, consents, check-in and check-out records.

- ✓ **Extras in three taps**
Staff add them during the month; they appear on the livery statement.
- ✓ **Accounting export**
A CSV file ready for your accountant. VAT invoice mode with sequential numbering, if you choose it.
- ✓ **Owner area**
Their horses, upcoming vaccinations, their documents. Turnout or visit requests, horse walker bookings.

WHAT YOU GAIN

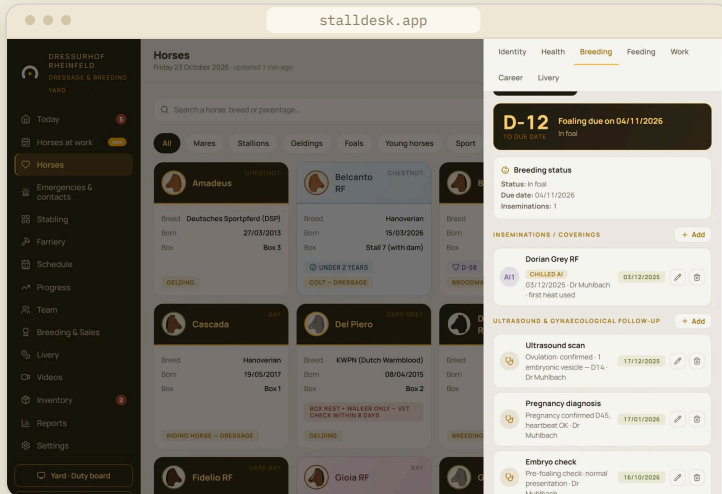

Month-end is done in a few taps, and requests arrive in writing instead of interrupting your work. Your owners see a well-run yard: it's your best shop window.

BREEDING

Breeding managed mare by mare, right through to the foal

Inseminations and coverings, scans, calculated due date, foaling box, foals and sales, with alerts that arrive before the due date, not after.

A mare's breeding season, on her record

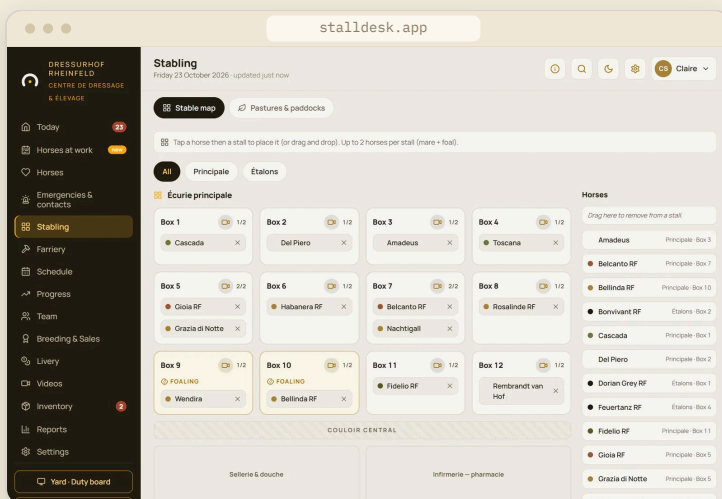

WHAT YOU GAIN No breeding date forgotten: imminent foaling is announced on the whole team's screen.

YARD AND PADDOCKS

Your yard on a map, the day's duties on the wall

Boxes, fields, paddocks, horse walker: everyone knows where each horse is, and a tablet in the aisle shows the day's duties.

The stable map, box by box

WHAT YOU GAIN The team knows where every horse is, and instructions no longer get lost on the aisle tablet.

Breeding records

In foal, with foal at foot or empty; chilled or frozen AI, covering, embryo transfer.

Scans and due date

From the 14-day scan to the pre-foaling check, with a countdown visible to the whole team.

Pedigree and career

Three-generation pedigree, SIRE/UELN number, microchip, premiums and gradings.

Breeding and sales

Sales contract as a PDF, in three languages, with deposit and VAT.

Stable map

Visual editor, several buildings, horses placed by drag and drop.

Fields and paddocks

Today's turnout in real time; the usual arrangement restored in one tap.

Wall screens

Readable from a distance, refreshed every minute, with no personal data.

Weather and warnings

Gales, thunderstorms, hard frost: yard advice appears at the top of the screen.

The AI that does the typing for you

Copying out a passport, re-entering a prescription, reading back through weeks of sessions: these jobs need doing, but they take time the yard doesn't have. The StallDesk assistant prepares them from a photo or from your notes. You check, you confirm, and the day carries on.

Setting up a new horse's record

WITHOUT THE ASSISTANT Copying out the passport line by line: identity, colour, date of birth, breeding, ID numbers.

WITH THE ASSISTANT A photo of the passport pre-fills the record. You read it through, complete it and save.

Setting up a treatment

WITHOUT THE ASSISTANT Re-entering the vet's prescription, with the risk of a copying error on a dose.

WITH THE ASSISTANT A photo of the prescription pre-fills the medicine, dose, plan and duration. You check before confirming.

Reviewing the working week

WITHOUT THE ASSISTANT Reading back through the schedule and riders' feedback, horse by horse, to plan the next week's workload.

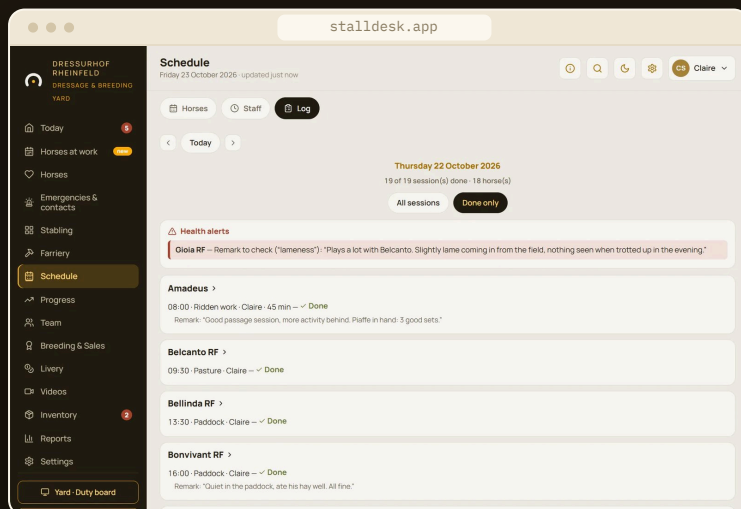

WITH THE ASSISTANT Every Sunday, an analysis is written for each horse being tracked: what was observed, what it is based on, what is suggested.

Recording how a session felt

WITHOUT THE ASSISTANT A form to fill in as you get off, or nothing written down for lack of time.

WITH THE ASSISTANT The rider types or dictates a few words. The assistant reads them and takes them into account in the week's analysis.

The session log: riders' feedback, analysed by the assistant

The AI prepares, you decide

- Nothing is saved or applied to the schedule without your confirmation.
- Triggered by you, one image at a time, with a notice before anything is sent.
- Optional and can be switched off for the whole yard: the rest of StallDesk works without it.
- Your data is not used to train a model.

The time you save depends on your yard: how many horses there are to set up, the treatments under way, the horses being tracked. Rather than quote a theoretical figure, we show you in the demo.

One yard, several trades: StallDesk adapts to yours

Livery, breeding, competition, sales: most yards combine several activities. StallDesk starts from a shared core, then you switch on the modules that match the way you work.

Livery yards

Horses that aren't yours, owners to keep informed, livery statements every month.

- ✓ Contracts, extras and livery statements
- ✓ A private area for every owner
- ✓ Health compliance and check-in/out records

Studs and breeders

Broodmares to follow from insemination to foaling, foals, sales.

- ✓ Breeding records and due-date countdown
- ✓ Pedigree, premiums and gradings
- ✓ Homebred stock, sales and contracts

Competition and dressage yards

Horses at work, riders, care to plan ahead of competitions.

- ✓ Each horse's working week
- ✓ Rider feedback and workload indicators
- ✓ Farrier, dentist and osteopath kept up to date

Large yards

Several buildings, a big team, staggered hours.

- ✓ Map of several stable blocks and many paddocks
- ✓ Staff rota, hours and clock-in
- ✓ Wall screens in every aisle

StallDesk has been tested with a hundred horses, thirty people and four stable blocks.

A screen for everyone, one version of the truth

The office, the stable aisle, the arena and the owners all look at the same data, each seeing what concerns them.

IN THE OFFICE

Management sees everything at a glance

Due dates, horses to watch, low stock, owner requests: the "Today" screen tells you what needs your attention.

IN THE AISLE

The team knows what to do

Everyone logs in with their own code and sees first what they still have to do.

IN THE ARENA

Riders take notes, the assistant analyses

Session feedback takes a few seconds to enter, by finger or by voice.

FROM A DISTANCE

Owners follow their horse

A private area, opened with a link and a code: their horses, their documents, their requests.

Your yard's data, looked after as carefully as your horses

Your horses' records, your owners' contact details and your care history are the capital of your business. Here, without jargon, is how StallDesk protects them.

HOSTING	OVHcloud servers located in France
SEPARATION	Each yard has its own database and its own file storage
BACKUP	Every night, then an encrypted copy off the server, in France: 7 daily, 4 weekly and 6 monthly copies
TEAM ACCESS	A personal code for each person, never stored in plain text, and access levels
AUDIT TRAIL	A log of creations, changes and deletions, with who made them
OFFLINE	Today's data stays available, and entries are sent as soon as the connection returns
GDPR	Data processing agreement signed before you start; you remain the owner of your data and can export it at any time

You only pay for what serves your yard

A shared core, plus modules switched on with no reinstalling. The "Modules in your subscription" screen always shows what's included.

CORE Today, horses, health and care, team, documents, instructions, emergencies and contacts

YARD Stables and paddocks, session scheduling, farriery

BREEDING Breeding and sales, media library

MANAGEMENT Staff rota, stock, reports and statistics

LIVERY Owners, contracts, livery statements, owner area

OPTIONS AI assistant, Progress, cameras

€ The price depends on the size of your yard and the modules you choose. We work it out with you after the demo, with no obligation.

Installable app

In the browser or on the home screen, with no app store involved.

Three languages

Each device chooses its own, right down to the email reports.

Light or dark

For the yard screen as well as for foaling nights.

The artificial intelligence features (reading a passport or a prescription, weekly analysis) are optional and can be switched off. StallDesk does not use your data to train a model.

Born in the stable aisle, not in a meeting room

StallDesk is the tool we would have liked to find for our own yard. As it didn't exist, we built it at Haras du Steinberg, a stud and livery yard in the Sundgau, in southern Alsace, a few miles from Basel.

Behind StallDesk is Agathe Stempflin, owner and manager of Haras du Steinberg. A nurse anaesthetist and a rider, she knows the two demands StallDesk brings together: the rigour of properly recorded care, and the reality of a day on the yard. In anaesthesia, you note who gave what, at what dose and at what time. At the stud, she applied the same discipline to life on the yard: that's where the sign-off on every treatment comes from, along with the "Who gave it?" screen, each horse's emergency file and the report that closes every day.

Every new version goes live on the pilot yard first, before it's offered to anyone else. What isn't useful is taken out, what's missing is added. And because the yard sits on a border, StallDesk speaks English, French and German, right down to the reports sent by email.

"Care that isn't recorded hasn't been given."

The rule of anaesthesia, applied to the yard

1,068

automated tests re-run before every release

3

languages across the whole interface: English, French, German

100

horses, 30 people and 4 stable blocks: the scale StallDesk has been tested at

22

horses on the demo yard we show you

We only write what we have measured

You won't find invented uptime promises here, inflated customer numbers or testimonials written on your behalf. Whatever this brochure claims, we can show you in a demo.

— TAKE THE NEXT STEP

See StallDesk running a complete yard

Thirty minutes by video call: we walk through a whole day with a 22-horse demo yard (morning feed, care, farrier, work, broodmares, owners), then look together at what StallDesk would change for you.

- ✓ Free
- ✓ No obligation
- ✓ In English, French or German

- 1 You request a demo**
We reply within two working days to arrange a time.
- 2 Demo by video call**
Thirty minutes on a complete yard, with your questions.
- 3 A tailored price**
If StallDesk suits you, we put together a price tailored to your yard and the modules you choose.
- 4 Supported start**
We open your yard and set it up with you. A horse's record can be pre-filled from a photo of its passport.

Scan to book your demo

stalldesk.app/en/book-a-demo/

You may be wondering

How much does StallDesk cost?

The price depends on the size of your yard and the modules you switch on. We work it out with you after the demo, which is free.

Do I need to install anything?

No. StallDesk opens in the browser on any computer, tablet or phone.

What if I change my mind?

Your data belongs to you: a full backup of your yard can be downloaded from the settings at any time.

Book a free demo stalldesk.app/en/book-a-demo/
